

```

class base{
public:
    int x,y;
    base()= default;
    ~base()= default;
}
class derived: public base{
public:
    int z;
    derived()= default;
    derived()= default;
}

```

~base()= default; not virtual

object creation when a method is virtual

Base* b= new Derived();

vtable
